

GOLDBECK

GOLDBECK Prefab Elements QUALITY POLICY

GOLDBECK Prefab Elements is a production plant that specialises in manufacturing of precast reinforced concrete elements aimed for industrial and commercial building industry. Our precast products are the key element of the system solutions implemented by GOLDBECK Group all over Europe. Our production activity is based on modern technology, precisely organised processes and engineering responsibility. The primary goal of our organisation is ensuring high quality, durability and conformity of precast elements with the requirements of standards, designs and with clients' expectations. This goal is achieved by way of maintaining the effective Factory Production Control system, pursuant to the standard PN-EN 13369 and the discipline-specific standards, as well execution of welding processes in conformity with the requirements of the standards PN-EN 1090-2 and ISO 3834.

In connection with the above, **GOLDBECK Prefab Elements Sp. z o.o.** undertakes to the following:

Ensuring conformity of production with the standards and regulations in force

We operate in full conformity with the governing European standards concerning precast reinforced concrete elements and steelwork structures. We observe the provisions of the building law, the regulations of occupational health and safety and environmental protection, which guarantees safety and quality of our products.

Maintaining the effective Factory Production Control system

Our Factory Production Control system is the basis of quality control at every stage of production. We monitor and document processes from the moment of acceptance of material until the final inspection, ensuring full traceability and conformity of precast products with technical documentation.

Execution of welding processes in conformity with the requirements of EN 1090 and ISO 3834

We execute welding processes in conformity with technical documentation and governing standards. We take care of the welders' qualifications, ensure supervision by a welding coordinator and we also conduct the

required tests and inspection of quality of welding joints.

Ensuring responsibility and competences of personnel

We invest in development of qualifications of our employees, by way of building awareness of the impact of individual work on the quality of products. We support commitment and initiative, which are of key importance to maintaining of high standards.

Ensuring quality and satisfaction of clients

We execute orders in time and in conformity with the technical requirements. We react to the needs of clients and we implement corrective actions in case of warranty claims, taking care of long-term relations and trust.

Continuous improvement of the quality system and effectiveness of processes

We systematically analyse production data, conduct internal audits and implement innovations, in order to improve the effectiveness and quality of our products and processes on a continual basis.

The Quality Policy of GOLDBECK Prefab Elements is the foundation of operation of the company and the basis for defining any qualitative goals and decision-taking on all levels of the organisation. Observance of its rules is the obligation of every employee.
